RE: Panther Grove Wind Project
Evaluation of Changes Involving Seven (7) Wind Turbines

We have reviewed the most recent reports for the Panther Grove Wind Project with regard to the location shift of turbine T21 (~1,000 ft to the NE) along with the removal of six turbines including: T45, T46, T61, T62, T63 and T64. The following reports were reviewed and the potential impacts due to these seven wind turbines were re-evaluated:

- Microwave
- Land Mobile and Emergency Services
- Off-Air Broadcast TV
- Wireless Internet Services
- AM/FM Broadcast Radio
- Mobile Phone

We found that the location shift for T21 and the removal of T45, T46, T61, T62, T63 and T64 will not change the conclusions and recommendations in the above reports nor does it change my oral testimony provided at the public hearing on 12/3/20.

If there are any questions or concerns, please feel free to contact me.

Sincerely,
COMSEARCH
